

Appian for SharePoint 2013

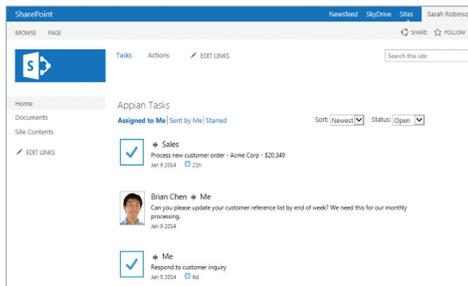

Extend the capabilities of your existing Microsoft Office SharePoint Server 2013 system with Appian's market leading Business Process Management Suite (BPMS). Using Appian for SharePoint, users can easily track and collaborate on business events and news, complete assigned tasks, and initiate process-enabled actions from their familiar work environment in Microsoft SharePoint.

Appian for SharePoint 2013 provides access to Appian's intelligent BPMS and collaborative user interfaces inside Microsoft SharePoint 2013 pages. Appian enables orchestration of business processes, complex system events, rules, user input forms, while detailing Business Activity Monitoring (BAM) analytics of all user actions. Appian's comprehensive and flexible platform allows developers to rapidly extend the value of Microsoft SharePoint 2013 by incorporating market-leading Business Process Management capabilities.

Microsoft SharePoint administrators may also use Appian to apply automated governance across the management of SharePoint, preventing content sprawl and reducing long term administration costs of SharePoint. Appian's BPM Modeler may be used to orchestrate the automatic construction and destruction or archival of SharePoint content, ensuring all content is managed according to a single enterprise governance model.

APPIAN FOR SHAREPOINT 2013 FEATURES

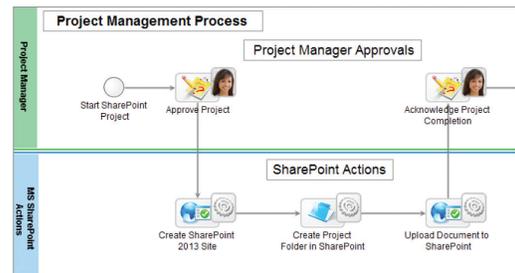

SharePoint WebParts expose the the following Appian components in SharePoint 2013:

- **News Web Part** - Embed Appian's collaborative activity stream in SharePoint to track business events and system alerts, post messages and comments for collaboration, and access related documents
- **Tasks Web Part** - View, track, and complete work tasks and case assignments using Appian's market-leading BPM Suite directly in SharePoint
- **Actions Web Part** - Initiate process orchestration, such as new IT service request, customer on-boarding, procurement processing, financial deduction processing and exception handling, insurance claims management, pharmacovigilance, compliance, and more

With Appian for SharePoint 2013, users benefit from the simplicity of single sign-on user authentication between Microsoft and Appian accounts with Microsoft Active Directory or the SharePoint Secure Store Service.

APPIAN FEATURES

Available through web and mobile interfaces, the Appian BPM Suite is the easiest way to manage processes, documents, records, reports, and user collaborations across the enterprise. Appian provides a modern application platform to drive better business decisions, actions and results. Key Appian features include:

Interface Design - Build intelligent user interfaces to capture task inputs from users. Forms may include data aggregation from multiple sources, rules for ensuring data quality, and a responsive interface that will optimize for web browsers or mobile devices.

Process Modeling and Orchestration - Use Business Process Model and Notation (BPMN) drag-and-drop design tools to rapidly capture enterprise workflows and turn process models directly into executable solutions.

Process Analytics - Automatically capture detailed metrics on all user activity in your processes, including lag and work durations, deadlines and Service Level Agreements (SLAs).

Collaboration - Monitor business events and collaborate with other users in Appian's social activity stream to respond to ad-hoc events and keep processes moving.

As the market leader in modern Business Process Management (BPM) software, Appian delivers an enterprise application platform that unites users with all their data, processes, and collaborations – in one environment, on any mobile device, through

a simple social interface. On-premise and in the cloud, Appian is the fastest way to deliver innovative business applications.
