Appian for Public Sector

ASSET DATA MANAGEMENT

> Manage, maintain and track organizational assets and resources

> Integrate and maintain multiple data repositories

> Ensure operational data integrity and regulatory compliance

> Enable faster, more effective business process responses

The Public sector is facing increased fiscal pressure which demands improved asset performance and reliability. Simultaneously, agencies are contending with aging legacy infrastructure and ever tightening regulations, and this combination is negatively impacting agency efficiency and responsiveness. Fortunately, IT modernization, which is improving many public sector functional areas, is particularly powerful when applied to asset data management.

Whether they are managing technology, vehicles, or weapons platforms, government organizations need to manage and expose accurate, complete, and on-time information across the complete asset lifecycle . The reality, however, is that while agencies are investing significant time and effort to consolidate and manage asset information they are hampered by disconnected systems, and antiquated tools, and frequently resort to costly and error-prone manual processes.

The result? The absence of trusted asset information management and governance not only impacts the productivity and efficiency of staff managing asset operations, it also limits effective, informed decision making throughout the supply chain, all of which drives increased operational expenses and frequently reduced asset performance.
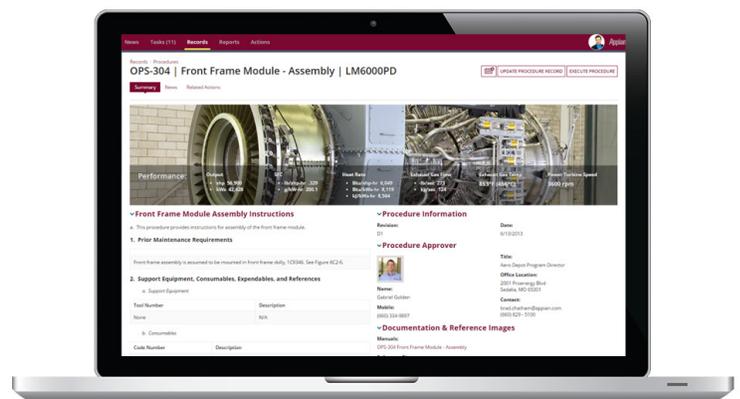

To optimize asset performance, agencies require an efficient and holistic information management solution that provides actionable intelligence. Is your agency equipped with the right data and processes for the future?

MEET THE CHALLENGE

The critical need to utilize data for operational insights is driving agencies to adopt effective asset data management techniques. The first step in the process is having the right technology solution in place.

With Appian, agencies can:

- Increased data accuracy driving more efficient operations
- Single source for information from multiple system of records
- Reduced costs through mitigating excess inventory
- Structured work streams for quality and compliance

FOCUS

Appian provides the capabilities that agencies need to deliver complex asset data management to support their mission objectives.

- Ensure asset management operational data integrity and regulatory compliance

- Facilitate Improved operational efficiencies

- Achieve increased availability, accuracy, and completeness of asset information

- Store content from multiple sources in one easy to access interface

TAKE CONTROL

Accelerate the entire logistics and asset management process with public sector solutions for:

- Asset Data Management
- Logistics Management
- Fleet and Asset Management
- Field Service Management
- Facilities Management
- Mobile Maintenance

PREPARE FOR THE FUTURE

It takes speed and power to deliver transformational public sector solutions. The Appian application platform provides both.

Transform critical, public sector services with an application platform that delivers high-speed, cost-effective IT modernization that fits your specific organizational demands.

With Appian, your agency can harness the power of a unified, low-code platform on premises or in the cloud to manage complex processes, end-to-end, without limitations.

LEADING ORGANIZATIONS TRUST APPIAN:

Appian

Appian provides a leading low-code software development platform that enables organizations to rapidly develop powerful and unique applications. The applications created on Appian's platform help companies drive digital transformation and enables competitive differentiation.
